

Ethanol: Helping Missouri's economy turn the corner.

Missouri is improving its economic future by investing in ethanol production. When you take a peek at each of the six farmer-owned ethanol plants in Missouri, you'll see that they deliver a powerful economic benefit for our state. As shown in a recent study, on an annual basis **each** ethanol plant:

- Generates \$30.7 million in employment income—good jobs that attract young people, support families and revitalize rural communities
- Creates \$59.3 million in value-added income to Missouri's economy, giving a boost to communities across Missouri and keeping your money here at home
- Contributes more than \$10 million in tax payments that support local schools, build roads and fund public safety services

So every time you fill up with ethanol, you're investing some of your hard-earned money into our communities—and sending less overseas.

Missouri's ethanol industry is recharging our state by capitalizing on homegrown resources to reveal a more prosperous tomorrow. And during a time of economic challenges, that's a fact you cannot hide.
